

Houston Internship Program

TTU College of Architecture

Studio Updates

The students have now moved into schematic design phase of the project. The project is fast-tracked in order to reach the point of completion by August 5 studio review.

The student's spent last week revising their programs and their site analysis work. The three teams have conceptually moved in three different directions with the initial design solution.

They have been told that they are to consider the developer's concept, but that the solution should be driven also by a commitment to the best solution for the site and community.

This provide us with three different approaches and a more interesting dialog about the possibilities for mixed-use developments.

Herman Park duck pond, 2005

A special thanks to Wally Ford and Chris Vadala of Haynes Whaley Associates for their lecture last Wednesday.

The presentation focused on high rise structures and was both interesting and educational for the studio...and for me as well.

Both Chris and Wally have also offered to come in to provide desk crits with the teams on structural design. This will be such a great resource for the students and in advance, we want to say thank you.

MaryAlice Torres-MacDonald, Associate Professor

Internship and Studio

A reminder that all students in the internship program work 32—35 hours per week in order to be able to complete their studio work for the summer. Getting the work for a 15 week semester completed in 11 1/2 weeks is a big challenge.

They work in teams which requires meeting outside of studio. We appreciate your understanding and support!
