## **Work for Comment Process**

---

When you submit work for mark- up/comment, it needs to be done in word. The reason – it is much easier to write on the work if it is submitted this way.

So how to do it?

You only need to save your drawings and then go to word and insert the drawings. You can do this whether your drawings are in CAD or any other software, so it shouldn't present a problem. I worked with Wilson Architectural Group on this so that their clients could mark up drawings for them and it has worked well.

For the most part, you will submit in landscape format. Submitting in word gives me more writing capabilities and I like the highlighter tool.
