

No. 3 – Case Study and Diagramming

City of Houston

Due Friday, September 18

- 1) Identify one city as a case study to present to the studio. This case study must have some relationship to Houston (it could be similar weather, coastal city, etc...)
- 2) Establish the following diagrams for presentation on Friday. Friday will be work session where we will review case studies and diagrams to finalize the framework for research design.
 - 1) Diagram – free form – FLOODING
 - 2) Position One – Design for Flooding
 - 3) Position Two – Design to Prevent Flooding

Approach for diagram is completely left to your discretion. Do what feels most natural to you. Explore beyond the frame that you may think exists. Let your ideas free-flow as you diagram. Use one color for the diagramming, but as you later identify other relationship, use an alternate color to connect those areas to each other as we discussed in studio.
